# energybank ThinLine LED wins Silver at Plant Engineering “Product of the Year” Awards

*Manitowoc, Wisc. – April 10, 2017*

energybank’s newest LED lighting platform, ThinLine®, won the prestigious Silver Award in the Lighting category at the 29<sup>th</sup> Annual Plant Engineering Awards ceremony held April 3 in Chicago.

Representing energybank at the event was Vice President Tim Eylander, who stated, “It’s quite an honor to compete and place alongside industry giants like Hubbell and Crouse Hind. There were entries from over all the world, including Orion Energy Systems, from across town.”

Made in the USA, the ThinLine family of LED has patent-pending elements developed in-house by the energy bank team.

“energybank and its ground-breaking products truly represent the best in American innovation,” said energybank founder and CEO, Neal Verfueth. “This is the second award from Plant Engineering for energybank and validates what we mean by LED Done Right.”

ThinLine combines a sleek, modern form factor with LED technology that delivers maximum footcandles per watt consumed.

The ThinLine platform features options such as a potentiometer in each fixture for adjusting light levels for individual user’s requirements; bi-level light output using existing branch circuit switching; or wireless remote control full-range dimming.
