

# energybank. Custom Retrofit Kits

## Energy savings, performance and long life

energybank custom retrofit kits are made in our state-of-the-art metal fabrication facility with best-in-class light engines that can replace traditional 150W-1000W metal halide lamps in your existing wall pack or flood light fixtures.

energybank light engines are custom designed to deliver exceptional light output with precise, proprietary optics for your specific application. Can be quickly configured and manufactured to fit most existing fixtures.

In addition to gaining better illumination, enjoy 100,000 hour maintenance-free operating life due to our superior thermal management.

### Features:

- 120V - 277V
- 5000K
- 85 CRI
- 6kV Integral transient voltage protection for driver
- Thermal protection for components

### Options:

- 60W to 400W LED light engines
- Custom optics for specific applications

### Regulatory and voluntary qualifications

- Product constructed of FCC & UL listed and/or recognized components

### Limited Warranty:

- 5-year standard

Every custom retrofit kit is designed to quickly and easily fit the fixture.

These are custom products, call your representative for additional details.
