

Case Study

energybank. Industrial Waste Management

"Every Day, Driven to Deliver Service First, Safety Always"

Advanced Disposal

Advanced Disposal - Sheboygan, WI

Advanced Disposal in Sheboygan, Wisconsin upgraded both their interior and exterior lighting systems to high-performance, energy-efficient, award-winning, made in the USA, LED fixtures from energybank.

"With the new lighting from energybank, we increased the light levels both inside and outside for vehicle inspections, driver safety and overall better operating environment. It's really made a big difference.

The interior fixtures are being replaced as the old lamps fail. We can easily do the installation ourselves due to the compatible design of the energybank fixtures, saving even more cost."

Michael Thun, General Manager - Sheboygan, Wisconsin

Vehicle inspections can now be more easily done outside with the additional wall packs from energybank strategically located between the parking spots for the trucks.

The wall packs have excellent light cutoff that reduces glare for drivers when backing up to the doors.

Lot lighting was greatly improved with the upgrade to energybank exterior fixtures. With a 100,000 hour life and superior optics, drivers can easily see their vehicles for inspection and navigate safely for years to come.

Efficient. Sustainable. Good business. That's LED Done Right®.
